# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

Cool, breezy, and wet into Tuesday, with Isolated Thunderstorms Today.

North-Northeast and Offshore Winds Gusting to 30 mph from the Western Sierra Slopes to the Coast Wednesday through Friday.

A deep low pressure trough will be over the West Coast today, then move east. An area of light to moderate rain and mountain snow is spreading across Northern California. The bulk of the precipitation will come today, and isolated thunderstorms are possible. Isolated to scattered light showers will continue on Monday and Tuesday as northwesterly flow brings further waves of wet weather to Northern California. Temperatures will be 12-17 degrees below normal today, with southwest to northwest gusts reaching 20-30 mph and relative humidity remaining above 40%.

Monday and Tuesday will be slightly warmer with lighter winds. Rainfall totals by late Tuesday will be 1-1.50 inches in far northwest California, 0.10-0.50 inches in the mountains and northern valleys, and a trace to 0.10 inches at lower elevations in the south. Snow levels will be near 5000 feet in the north and 6000 feet in the south through early Monday, then gradually rise. High pressure will build in from the west beginning Wednesday and continue into the following week, producing a warming and drying trend with occasionally gusty north to northeast down slope winds gusting to 30 mph from the western Sierra to the coast. The exception will be the weekend of 10/08-10/09, when a series of weak frontal systems interrupt the high pressure pattern with cooler and cloudier weather.

## **SOUTHERN CALIFORNIA**

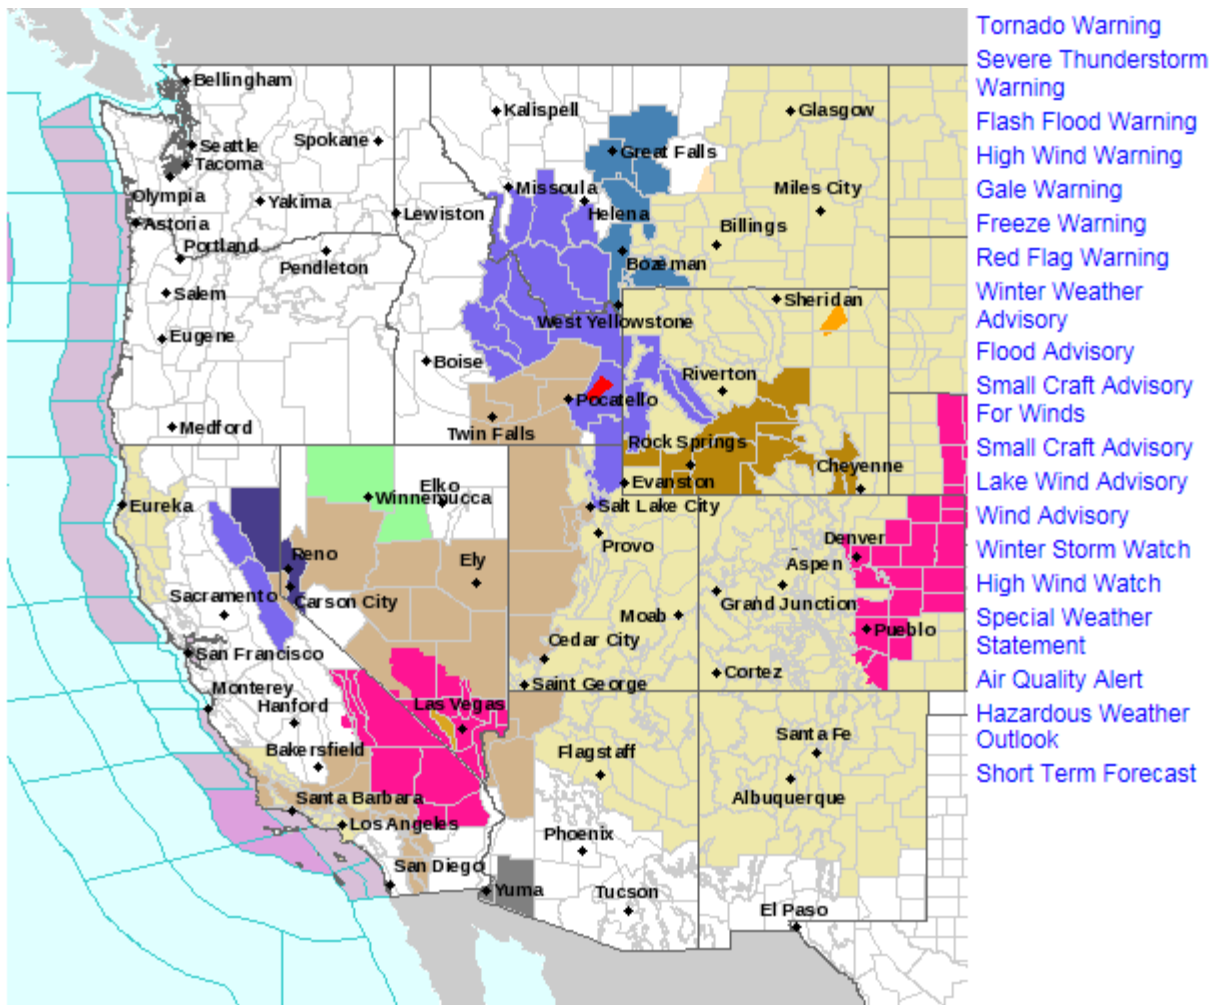

Strong and gusty southwest to west winds over the mountains and deserts today.

Strong and gusty northwest winds along the Central Coast southward to the I-5 Corridor tonight and Monday.

A trough will move into northern California today and will bring cool and windy weather to much of the local region during the next couple of days. Southwest to west winds of 20 to 30 mph with gusts to near 50 mph will develop over the mountains and deserts today, with the strongest winds over the Antelope Valley, the Tehachapi Mountains, and across parts of the Angeles National Forest. Coastal areas should see southwest to west winds of 10 to 20 mph along with higher gusts. It will be much cooler throughout the region with daytime highs in the 40s and 50s in the mountains, upper 60s in the San Joaquin Valley, and in the 70s in the valleys of Southern California through Monday. Some scattered light showers will be possible north of a line from Monterey to Yosemite this afternoon and evening, and again on Monday with snow levels near 6,500 feet. Winds will turn more northerly starting this evening and continuing through Monday as the trough moves into Nevada and Utah. The strongest winds will shift to areas such as parts of the Central Coast, Santa Barbara County, and the I-5 Corridor region where sustained wind speeds of up to 30 mph can be expected. Winds across all areas will diminish by Monday afternoon. A dry northwest flow aloft will prevail across the region during much of the remainder of the week with a warming trend expected along with lighter winds. By Thursday morning, surface high pressure will build into the Great Basin with gusty offshore winds developing across Southern California Thursday and Friday. At this time, winds associated with this next possible Santa Ana look to be weak. Much warmer and drier weather can be expected over all the region by the end of the work week, especially west of the coastal ranges in Southern California.
